

The background is a pre-designed picture and inserted in to dashboard using 'Image'

Places marked yellow:

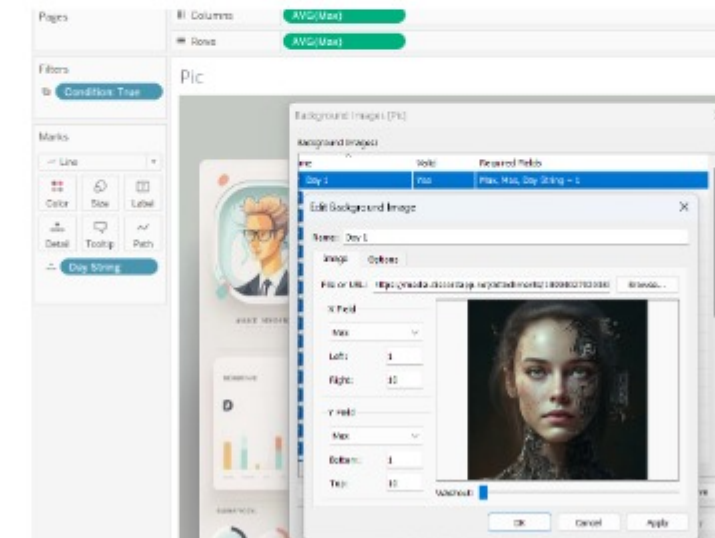

- Unchanged: the description card is pre-designed (aka. background and 'Day')
- Picture and content are separate worksheets that changes when parameter changes.

Trick1:

How to insert image into worksheet and let the image change when parameters change?

- Map -> background images ->
Required fields: max always = 10,
day string = str(day)

Trick2:

How to swap the dashboard based on previous/next button?

1. The function is based on parameter value change.
2. New measures/dimensions:
 - a. Day string: string of day
 - b. Next: if day = 30, then 1, else day+1
 - c. Prev: if day = 1, then 1, else day - 1
 - d. Condition: day = parameter day.
3. How to change parameters by clicking on 'certain button':
 - a. Button is not a image inserted directly into a dashboard. It is a separate worksheet that can also control the parameter change.
 - b. Filter for condition: Condition = True, this can keep the value we want, if = False, there will be duplicated/useless content show up.
 - c. Logic: Add action for worksheets -> Target parameter: Day -> source field: prev -> Condition filter work, adjust the content
4. How to let the worksheet content change when parameters changed?
 - a. Picture: It is actually the background image. Only shown when the requirements are satisfied.
 - b. Content: see above.
